

Feedback Needed!

**Join the conversation about
above-ground biodiversity on New York dairy farms!**

Are you a farm-owner or primary decision-maker for a dairy operation in New York?

Are you seeking a way to get involved in the development of new sustainability solutions?

The Nutrient Management Spear Program's Dairy Sustainability team is taking a farmer-first approach to create a biodiversity monitoring program. We are seeking feedback on recently developed indicators of above-ground biodiversity for New York farms.

- Groups of 3-5 producers.
- Participants will complete a 45-minute survey (group setting) reviewing a list of potential biodiversity indicators for NY dairy.
- Discussion of the topics of the survey with other participants is highly encouraged.
- A moderator will be present to guide participants through the survey and take discussion notes.
