## 1. General Survey Summary

Madison County lies adjacent to Oneida Lake. It comprises 423,300 acres and is mainly rural in nature. The county is divided into two distinctly different physiographic areas. The Ontario (Oneida) Lake Plain in the northern area of the county and the uplands of the Appalachian Plateau in the south are separated by the Helderberg Escarpment, an east-west limestone outcropping that bisects the county.

Dairy farming is the major agricultural enterprise and the cropping sequence in general relies on corn and alfalfa with some small grains being grown. The number of alternative livestock operations is increasing in the uplands of the county where abundant open lands are used for grazing. There are several vegetable and other horticultural operations in the northern lake-plain section of the county.

This survey summarizes the soil test results from Madison County soil samples submitted for analyses to the Cornell Nutrient Analysis Laboratory (CNAL) during 1995-2001. The total number of samples analyzed in these years amounted to 2150. Of these samples, 2039 samples (95%) were submitted to obtain fertilizer recommendations for commercial production while 111 samples (5%) were submitted as home and garden samples.

<b>Homeowners</b>		<b>Commercial</b>		<b>Total</b>
1995	16	1995	128	144
1996	23	1996	187	210
1997	12	1997	89	101
1998	13	1998	251	264
1999	10	1999	278	288
2000	15	2000	424	439
<u>2001</u>	<u>22</u>	<u>2001</u>	<u>682</u>	<u>704</u>
Total	111	Total	2039	2150

Forty one percent of the home and garden soil samples during 1995-2001 were submitted to request fertilizer recommendations for vegetable production while 12% of the samples were lawn soil samples, 12% were soils used to grow ornamentals, and 10% were other perennials. People submitting samples for commercial production requested fertilizer recommendations for corn silage or grain (42%), hay production (12%), alfalfa, alfalfa/grass or alfalfa/trefoil mixtures (29%), or pasture (5%), while a few producers were planning on growing other crops including birdsfoot trefoil, clover/grass mixtures, small grains and sweet corn.

Home and garden samples in Madison County were mostly sandy loam soils belonging to soil management group 4 (48%). Twenty eight percent belonged to soil management group 2. Group 3 was represented by 30% of all samples and 5% were classified as sandy (soil management group 5). The table on page 6 gives descriptions of each of the soil management groups.

Of the samples submitted for commercial production, 54% belonged to soil management group 3. Three percent were from soil management group 4. Very few of the samples belonged to either group 1 or group 5 while 41% were classified group 2. The six most common soil series, all belonging to soil management group 2 or 3, were Mardin (15%), Lansing (11%), Palmyra (7%), Howard (7%), Honeyeye (7%) and Cazenovia (7%). These soils represent 12.7% (Mardin), 4.4% (Lansing), 4.2% (Palmyra), 2.1% (Howard), 9.8% (Honeyeye) and 3.4% (Cazenovia) of the total 423,300 acres in the county.

### Soil Management Groups for New York

1	Fine-textured soils developed from clayey lake sediments and medium- to fine-textured soils developed from lake sediments.
2	Medium- to fine-textured soils developed from calcareous glacial till and medium-textured to moderately fine-textured soils developed from slightly calcareous glacial till mixed with shale and medium-textured soils developed in recent alluvium.
3	Moderately coarse textured soil developed from glacial outwash and recent alluvium and medium-textured acid soil developed on glacial till.
4	Coarse- to medium-textured soils formed from glacial till or glacial outwash.
5	Coarse- to very coarse-textured soils formed from gravelly or sandy glacial outwash or glacial lake beach ridges or deltas.
6	Organic or muck soils with more than 80% organic matter.

Organic matter levels, as measured by loss on ignition, ranged from less than 1% to over 35% with median values ranging from 4.2 to 5.5% organic matter for home and garden samples and values ranging from 4.1 to 4.6% for samples submitted for commercial production. Forty nine percent of the home and garden samples had between 2 and 5% organic matter with 9% testing between 2 and 2.9% organic matter, 23% between 3.0 and 3.9% organic matter and 17% between 4.0 and 4.9% organic matter. Forty six percent of the soils submitted for home and garden tested >4.9% in organic matter while 5% have less than 2% organic matter. Of the samples submitted for commercial production, 24% contained between 3 and 4% organic matter, 38% tested between 4.0 and 4.9% while 17% had organic matter concentrations of 5.0-5.9%. In total, 62% of the samples had organic matter levels between 4.0 and 6.9%.

Soil pH in water (1:1 extraction ratio) varied from pH 4.0 to 8.1 with the median for home and garden samples ranging from pH 6.6 to pH 7.4 and for samples submitted for commercial production ranging from pH 6.0 to 6.6. Of the home and garden samples, 60% tested between pH 6.0 and 7.4. For the samples submitted for commercial

Ketterings, Q.M., H. Krol, W.S. Reid and K. Evans (2003). Madison County Soil Sample Survey 1995-2001. CSS Extension Bulletin E03-18. 39 pages.

production, 77% tested between pH 6.0 and 7.4 while 14% tested between pH 5.0 and 5.9.

Extractable nutrients such as phosphorus (P), potassium (K), magnesium (Mg), calcium (Ca), iron (Fe), manganese (Mn), and zinc (Zn) were measured using the Morgan solution and extraction method (Morgan, 1941). This solution contains sodium acetate buffered at a pH of 4.8.

Soil test P levels of <1 lbs P/acre are classified as very low. Between 1-3 lbs P/acre is low. Medium is between 4-8 lbs P/acre. High testing soils have P levels between 9 and 39 lbs P/acre and soils with >39 lbs P/acre are classified as very high in P.

Of the home and garden samples, 24% tested low, 13% were medium, 25% high and 38% tested very high. This meant that 62% tested high or very high in P. Phosphorus levels for samples for commercial production in Madison County were lower than the state average (50% tests high or very high in P). Nine percent of the samples tested very high in P. Thirty percent were low in P, 28% tested medium for P while 33% of the submitted samples were classified as high in soil test P. This means that 48% tested high or very high in P. There were no clear trends in P levels over the 6 years.

Classifications for potassium depend on soil management group. The fine-textured soils of soil management group 1 have a greater K supplying capacity than the coarse textured sandy soils (soil management group 5). Classification for each of the management groups in the above table represent very low, low, medium, high and very high. For example, for soil management group 5 and 6, <60 lbs K/acre means the soil is very low in K, between 60 and 114 lbs K/acre is low, 115-164 lbs K/acre is medium, 165-269 lbs K/acre is high and >269 lbs K/acre is classified as very high (see the table below).

Of the home and garden samples, 19% were classified as very low or low in potassium. Eleven percent tested medium, 30% high and 41% very high. For samples submitted for commercial production, 1% tested very low in K, 11% tested low, 20% tested medium, 28% tested high and 38% tested very high in potassium. As with phosphorus, there were no trends over the 6 years of soil sampling.

Potassium classifications depend on soil test K levels and soil management group.

Soil Management Group	Potassium Soil Test Value (Morgan extraction in lbs K/acre)				
	Very low	Low	Medium	High	Very High
1	<35	35-64	65-94	95-149	>149
2	<40	40-69	70-99	100-164	>164
3	<45	45-79	80-119	120-199	>199
4	<55	55-99	100-149	150-239	>239
5 and 6	<60	60-114	115-164	165-269	>269

Soils test very low for magnesium if Morgan extractable Mg is less than 20 lbs Mg/acre. Low testing soils have 20-65 lbs Morgan Mg per acre. Soils with 66-100 lbs Mg/acre test medium for magnesium. High testing soils have 101-199 lbs Mg/acre while soils with more than 200 lbs Mg/acre in the Morgan extraction are classified as very high in Mg. Magnesium levels ranged from 21 to almost 2140 lbs Mg/acre (Morgan extraction). There were no samples that tested very low in Mg. Most soils tested high or very high for Mg (95% of the homeowner soils and 97% of the soils of the commercial growers). No more than 5 of the homeowner soils and 3% of the commercial growers' soil tested low or medium in Mg. Thus, magnesium deficiency is not likely to occur in Madison County provided the soil pH is maintained in the desirable range.

Soils with more than 50 lbs Morgan extractable Fe per acre test excessive for Fe. Anything lower than 50 lbs Fe/acre is considered normal. Iron levels fell for 95-97% in the normal range with 5% of the home and garden samples and 3% of the samples for commercial production testing excessive for Fe. Similarly, most soils (95-99%) for both groups tested normal for manganese. Soils with more than 100 lbs Morgan extractable Mn per acre are classified as excessive in Mn. Anything less than 100 lbs Mn per acre is classified as normal. Soils with less than 0.5 lbs zinc per acre in the Morgan extraction are classified as low in Zn. Medium testing soils have between 0.5 and 1 lbs of Morgan extractable Zn per acre. If more than 1 lb of Zn/acre is extracted with the Morgan solution, the soil tests high in Zn. For the home and garden samples, 86% tested high for

Ketterings, Q.M., H. Krol, W.S. Reid and K. Evans (2003). Madison County Soil Sample Survey 1995-2001. CSS Extension Bulletin E03-18. 39 pages.

zinc while 14% tested medium and 1% was low in Zn. Of the samples for commercial production, 6% tested low in zinc, 33% tested medium while 61% were high in zinc.

In the following sections, the summary tables for each of the soil fertility indicators described above are given. The appendix contains the crop codes used in section 2.

## Appendix: Cornell Crop Codes

Crop codes are used in the Cornell Nutrient Analyses Laboratory.

Crop Code	Crop Description
	Alfalfa
ABE	Alfalfa trefoil grass, Establishment
ABT	Alfalfa trefoil grass, Established
AGE	Alfalfa grass, Establishment
AGT	Alfalfa grass, Established
ALE	Alfalfa, Establishment
ALT	Alfalfa, Established
	Birdsfoot
BCE	Birdsfoot trefoil clover, Establishment
BCT	Birdsfoot trefoil clover, Established
BGE	Birdsfoot trefoil grass, Establishment
BGT	Birdsfoot trefoil grass, Established
BSE	Birdsfoot trefoil seed, Establishment
BST	Birdsfoot trefoil seed, Established
BTE	Birdsfoot trefoil, Establishment
BTT	Birdsfoot trefoil, Established
	Barley
BSP	Spring barley
BSS	Spring barley with legumes
BUK	Buckwheat
BWI	Winter barley
BWS	Winter barley with legumes
	Clover
CGE	Clover grass, Establishment
CGT	Clover grass, Established
CLE	Clover, Establishment
CLT	Clover, Established
CSE	Clover seed production, Establishment
CST	Clover seed production, Established

Crop Code	Crop Description
	Corn
COG	Corn grain
COS	Corn silage
	Grasses, pastures, covercrops
GIE	Grasses intensively managed, Establishment
GIT	Grasses intensively managed, Established
GRE	Grasses, Establishment
GRT	Grasses, Established
PGE	Pasture, Establishment
PGT	Pasture improved grasses, Established
PIE	Pasture intensively grazed, Establishment
PIT	Pasture intensively grazed, Established
PLE	Pasture with legumes, Establishment
PLT	Pasture with legumes, Established
PNT	Pasture native grasses
PNE	Pasture native grasses, Established
RYC	Rye cover crop
RYS	Rye seed production
TRP	Triticale peas
	Small grains
MIL	Millet
OAS	Oats with legume
OAT	Oats
SOF	Sorghum forage
SOG	Sorghum grain
SOY	Soybeans
SSH	Sorghum sudan hybrid
SUD	Sudangrass
WHS	Wheat with legume
WHT	Wheat
	Others
ALG	Azalea
APP	Apples
ATF	Athletic Field

Crop Code	Crop Description
ASP	Asparagus
BDR/BND	Beans-dry
BLU/BLB	Blueberries
BNS	Beans-snap
BRP	Broccoli-transplanted
CEM	Cemetery
END	Endives
FAR	Fairway
FLA	Flowering Annuals
GRA	Grapes
GEN	Green
GPF	Grapes, French-American
HRB	Herbs
IDL	Idle land
LAW	Lawn
LET	Lettuce
MIX/MVG	Mixed vegetables
MML	Muskmelon
ONS	Onion-seeded
OTH	Other
PAR	Pears
PER	Perennials
POP	Popcorn
PRK	Park
POT/PTO	Potatoes
PUM	Pumpkins
ROD	Roadside
ROS	Roses
ROU	Rough
RSF	Raspberries, Fall
RSP	Raspberries (homeowners)
RSS	Raspberries, Summer
SAG	Ornamentals adapted to pH 6.0 to 7.5
SQS	Squash, Summer
SQW	Squash, Winter
STE	Strawberries, Ever
STR	Strawberries (homeowners)
STS	Strawberries, Spring
SUN	Sunflowers

Ketterings, Q.M., H. Krol, W.S. Reid and K. Evans (2003). Madison County Soil Sample Survey 1995-2001. CSS Extension Bulletin E03-18. 39 pages.

Crop Code	Crop Description
SWC	Sweet corn
TOM	Tomatoes
TRE	Christmas trees, Established
TRF	Tree fruits
TRT	Christmas trees, Topdressing
