1. General Survey Summary

This survey summarizes the soil test results from Tioga County soil samples submitted for analyses to the Cornell Nutrient Analysis Laboratory (CNAL) during 1995-2001. The total number of samples analyzed in these years amounted to 1264. Of these 1264 samples, 1093 (86%) were submitted to obtain fertilizer recommendations for commercial production while 171 samples (14%) were submitted as home and garden samples.

Homeowners		Commercial		Total
1995	13	1995	154	167
1996	32	1996	148	180
1997	23	1997	105	128
1998	19	1998	192	211
1999	21	1999	82	103
2000	40	2000	68	108
<u>2001</u>	<u>23</u>	<u>2001</u>	<u>344</u>	<u>367</u>
Total	171	Total	1093	1264

Fifty-six percent of the home and garden samples were submitted to request fertilizer recommendations for mixed vegetable gardens while 15% of the samples came from athletic fields, and 6% came from mixed vegetable gardens. Other samples were sent in to request recommendations for azaleas, blueberries, flowering annuals, grapes, herbs, perennials, roses, ornamentals adapted to pH 6.0 to 7.5, squash, strawberries, sweet corn, tomatoes, tree fruits, and water melon. People submitting samples for commercial production requested fertilizer recommendations for corn silage or grain production (22%), alfalfa, alfalfa/grass or alfalfa/trefoil mixtures (20%), pasture (17%), hay production (11%), and clover grass mixes (6%), while the remainder of the samples was sent to the laboratory to request recommendations for other crops including small grains, potatoes, and sweet corn.

Home and garden samples in Tioga County were silty (22%), silt loams (35%), sandy loams (38%), or sandy (6%), belonging to soil management groups 2, 3, 4, and 5, respectively. The table below gives descriptions of each of the soil management groups.

Soil Management Groups for New York

1	Fine-textured soils developed from clayey lake sediments and medium- to fine-textured soils developed from lake sediments.
2	Medium- to fine-textured soils developed from calcareous glacial till and medium-textured to moderately fine-textured soils developed from slightly calcareous glacial till mixed with shale and medium-textured soils developed in recent alluvium.
3	Moderately coarse textured soil developed from glacial outwash and recent alluvium and medium-textured acid soil developed on glacial till.
4	Coarse- to medium-textured soils formed from glacial till or glacial outwash.
5	Coarse- to very coarse-textured soils formed from gravelly or sandy glacial outwash or glacial lake beach ridges or deltas.
6	Organic or muck soils with more than 80% organic matter.

Ketterings, Q.M., H. Krol, W.S. Reid and J. Degni (2004). Tioga County Soil Sample Survey 1995-2001. CSS Extension Bulletin E04-18. 37 pages.

Of the samples submitted for commercial production, 92% belonged to soil management group 3 while 5% was classified group 2 and the remainder was of unknown classification. The four most common soil series were Volusia (25%), Mardin (20%), Howard (15%), and Lordstown (14%). These soils represent 27% (Volusia), 7% (Mardin), 4% (Howard), and 28% (Lordstown) of the 334,800 acres in the county.

Organic matter levels, as measured by loss on ignition, ranged from 1% to over 50% (most likely an organic soil or amendment) with median values ranging from 4.3 to 5.4% organic matter for home and garden samples and from 4.4 to 4.7% for samples submitted for commercial production. Fifty-one percent of the home and garden samples had between 2.0 and 4.9% organic matter with 8% testing between 2.0 and 2.9% organic matter, 15% between 3.0 and 3.9% organic matter and almost 28% between 4.0 and 4.9% organic matter. Forty-seven percent of the soils submitted for home and garden tested >4.9% in organic matter while 2% of the samples had less than 2.0% organic matter. Of the samples submitted for commercial production, 17% contained between 3.0 and 3.9% organic matter, 42% tested between 4.0 and 4.9% while 24% had organic matter concentrations of 5.0-5.9%. Eight percent had less than 3.0% organic matter while 9% of the samples had 6.0% or more organic matter. In total, 83% of the samples had organic matter levels between 3.0 and 5.9%.

Soil pH in water (1:1 extraction ratio) varied from pH 3.3 to pH 11.5 (most likely an amendment) with the median for home and garden samples ranging from pH 6.2 to pH 7.1 and for samples submitted for commercial production ranging from pH 5.8 to pH 6.4. Of the home and garden samples, 62% tested between pH 6.0 and 7.4. For the samples submitted for commercial production, this was 67% while 29% tested between pH 5.0 and pH 5.9.

Extractable nutrients such as phosphorus (P), potassium (K), magnesium (Mg), calcium (Ca), iron (Fe), manganese (Mn), and zinc (Zn) were measured using the Morgan solution and extraction method (Morgan, 1941). This solution contains sodium acetate buffered at a pH of 4.8.

Soil test P levels of <1 lb P/acre are classified as very low. Between 1-3 lbs P/acre is low. Medium is between 4-8 lbs P/acre. High testing soils have P levels between 9 and 39 lbs

Ketterings, Q.M., H. Krol, W.S. Reid and J. Degni (2004). Tioga County Soil Sample Survey 1995-2001. CSS Extension Bulletin E04-18. 37 pages.

P/acre and soils with >39 lbs P/acre are classified as very high. Of the home and garden samples, 6% tested low, almost 14% tested medium, 42% tested high and 38% tested very high. This meant that 80% tested high or very high in P. Of the samples submitted for commercial production, 28% tested low in P. Twenty-seven percent were medium in P, 34% tested high while 11% of the samples were very high in P. In total, 45% of the samples tested high or very high in P. There were no clear trends over the 7 years.

Classifications for potassium depend on soil management group. The fine-textured soils of soil management group 1 have a greater K supplying capacity than the coarse textured sandy soils (soil management group 5). Classification for each of the management groups in the above table represent very low, low, medium, high and very high. So for example for soil management group 5 and 6, <60 lbs K/acre means the soil is very low in K, between 60 and 114 lbs K/acre is low, 115-164 lbs K/acre is medium, 165-269 lbs K/acre is high and >269 lbs K/acre is classified as very high (see the table below).

Potassium classifications depend on soil test K levels and soil management group.

Soil Management Group	Potassium Soil Test Value (Morgan extraction in lbs K/acre)				
	Very low	Low	Medium	High	Very High
1	<35	35-64	65-94	95-149	>149
2	<40	40-69	70-99	100-164	>164
3	<45	45-79	80-119	120-199	>199
4	<55	55-99	100-149	150-239	>239
5 and 6	<60	60-114	115-164	165-269	>269

Of the home and garden samples, 2% was classified as very low, 4% were low in potassium, 6% tested medium, another 20% were high and 68% were very high in potassium. For samples submitted for commercial production, 8% tested very low or low, 16% tested medium, 29% tested high and 44% tested very high in potassium while the remainder was of unknown K classification. As with phosphorus, there were no trends over the 7 years of soil sampling.

Ketterings, Q.M., H. Krol, W.S. Reid and J. Degni (2004). Tioga County Soil Sample Survey 1995-2001. CSS Extension Bulletin E04-18. 37 pages.

Soils test very low for magnesium if Morgan extractable Mg is less than 20 lbs Mg/acre. Low testing soils have 20-65 lbs Morgan Mg per acre. Soils with 66-100 lbs Mg/acre test medium for magnesium. High testing soils have 101-199 lbs Mg/acre while soils with more than 200 lbs Mg/acre in the Morgan extraction are classified as very high in Mg. Magnesium levels ranged from 33 to 15,579 lbs Mg/acre (Morgan extraction). There were only 10 samples in the home and garden datasets that tested low in Mg and none of the samples was very low in Mg. Most soils tested high or very high for Mg (98% of the homeowner soils and also 98% of the soils of the commercial growers). One percent of each group of samples tested medium in Mg. Thus, Mg deficiency is not likely to occur in Tioga County given optimum pH is maintained.

Soils with more than 50 lbs Morgan extractable Fe per acre test excessive for Fe. Anything lower than 50 lbs Fe/acre is considered normal. Ninety-eight percent of the home and garden samples were classified as normal in Fe while 95% of the commercial samples tested in the normal range for Fe. Similarly, almost all soils (91% of the home and garden samples and 97% of the commercial samples) tested normal for manganese. Anything less than 100 lbs Mn per acre is classified as normal. Soils with more than 100 lbs Morgan extractable Mn per acre are classified as excessive in Mn. Three percent of the commercial samples and 9% of the home and garden samples were excessive in Mn. Soils with less than 0.5 lb zinc per acre in the Morgan extraction are classified as low in Zn. Medium testing soils have between 0.5 and 1 lb of Morgan extractable Zn per acre. If more than 1 lb of Zn/acre is extracted with the Morgan solution, the soil tests high in Zn. For the home and garden samples, 1% tested low for zinc while 16% tested medium and almost 83% tested high for zinc. Of the samples for commercial production, 5% tested low in zinc, 33% tested medium while 62% of the samples were high in zinc.

In the following sections, the summary tables for each of the soil fertility indicators described above are given. The appendix contains the crop codes used in section 2.

Appendix: Cornell Crop Codes

Crop codes are used in the Cornell Nutrient Analyses Laboratory.

Crop Code	Crop Description
Alfalfa	
ABE	Alfalfa trefoil grass, Establishment
ABT	Alfalfa trefoil grass, Established
AGE	Alfalfa grass, Establishment
AGT	Alfalfa grass, Established
ALE	Alfalfa, Establishment
ALT	Alfalfa, Established
Birdsfoot	
BCE	Birdsfoot trefoil clover, Establishment
BCT	Birdsfoot trefoil clover, Established
BGE	Birdsfoot trefoil grass, Establishment
BGT	Birdsfoot trefoil grass, Established
BSE	Birdsfoot trefoil seed, Establishment
BST	Birdsfoot trefoil seed, Established
BTE	Birdsfoot trefoil, Establishment
BTT	Birdsfoot trefoil, Established
Barley	
BSP	Spring barley
BSS	Spring barley with legumes
BUK	Buckwheat
BWI	Winter barley
BWS	Winter barley with legumes
Clover	
CGE	Clover grass, Establishment
CGT	Clover grass, Established
CLE	Clover, Establishment
CLT	Clover, Established
CSE	Clover seed production, Establishment
CST	Clover seed production, Established

Crop Code	Crop Description
	Corn
COG	Corn grain
COS	Corn silage
	Grasses, pastures, covercrops
GIE	Grasses intensively managed, Establishment
GIT	Grasses intensively managed, Established
GRE	Grasses, Establishment
GRT	Grasses, Established
PGE	Pasture, Establishment
PGT	Pasture improved grasses, Established
PIE	Pasture intensively grazed, Establishment
PIT	Pasture intensively grazed, Established
PLE	Pasture with legumes, Establishment
PLT	Pasture with legumes, Established
PNT	Pasture native grasses
PNE	Pasture native grasses, Established
RYC	Rye cover crop
RYS	Rye seed production
TRP	Triticale peas
	Small grains
MIL	Millet
OAS	Oats with legume
OAT	Oats
SOF	Sorghum forage
SOG	Sorghum grain
SOY	Soybeans
SSH	Sorghum sudan hybrid
SUD	Sudangrass
WHS	Wheat with legume
WHT	Wheat
	Others
ALG	Azalea
APP	Apples
APR	Apricots

Crop Code	Crop Description
ASP	Asparagus
ATF	Athletic Field
BDR/BND	Beans-dry
BLU/BLB	Blueberries
BRP	Broccoli, Transplanted
BSP	Beans, Transplanted
CAR	Carrots
CBP	Cabbage, Transplanted
CEM	Cemetery
CHC	Chinese cabbage
EGG	Eggplants
END	Endives
FAR	Fairway
FLA	Flowering Annuals
GPA	Grapes, American
GPF	Grapes, French-American
GPV	Grapes, Vinifera
GEN	Green
GRA	Grapes
HRB	Herbs
IDL	Idle land
LAW	Lawn
LET	Lettuce
MIX/MVG	Mixed vegetables
MML	Muskmelon
NUR	Nursery
ONS	Onion-seeded
OTH	Other
PAR	Pears
PCH	Peaches
PEA	Peas
PEP	Peppers
PER	Perennials
POP	Popcorn
PRK	Park
POT/PTO	Potatoes
PSL	Parsley
PUM	Pumpkins
RAD	Radish

Crop Code	Crop Description
ROD	Roadside
ROS	Roses
ROU	Rough
RSF	Raspberries, Fall
RSP	Raspberries (homeowners)
RSS	Raspberries, Summer
SAG	Ornamentals adapted to pH 6.0 to 7.5
SPS	Spinach, Spring
SQS	Squash, Summer
SQW	Squash, Winter
STE	Strawberries, Ever
STR	Strawberries (homeowners)
STS	Strawberries, Spring
SUN	Sunflowers
SWC	Sweet corn
TME	Tomatoes, Early
TOM	Tomatoes
TRE	Christmas trees, Established
TRF	Turf
TUR	Turnips
WAT	Watermelons
